

Part1

Create login page and when user press login button create object login that hold the data and if username = admin and password = 123 show him message "welcome" , else show him message "not registered"
don't user alert or prompt , use dom to get the data from user and display it

username

password

LOGIN

Not registered? [Create an account](#)

Part2

The image shows a user interface for a Todo list application. It features a list of three tasks, each with a green checkmark icon and a red 'X' icon. The first task, 'Attend Lect 2', is highlighted with a green background. Below the list is a form to add a new task, consisting of a label 'Task', a text input field with the placeholder 'Task name', and a blue 'Add' button.

Attend Lect 2	✓	✕
Complete Lap2	✓	✕
Complete Bonus	✓	✕

Task **Add**

Create Todo list app similar to this ,

when user write task name and press add new task will be added to tasks list

When user click the done mark in green the task status will be updated to done

When user click the delete button , the task should be deleted from list
